EDUCATION

George Mason University

AUG 2024- 2028

Bachelor's in Cyber Security Engineering

Relevant coursework: Computer Networking, Cybersecurity, Object-Oriented Modeling & Design, Computer Programming, Discrete Mathematics, Systems Engineering Principles

WORK EXPERIENCE

Cyber Security Intern, Logic Finder

April - June 2026

- Conducted security testing using Kali Linux tools in lab environments
- Discovered system vulnerabilities through network scanning and enumeration
- Investigated network traffic with Wireshark and analyzed attack behavior
- Applied Linux commands and networking fundamentals to support security analysis

Cloud Infrastructure Research Intern, George Mason University

June 2026 - Present

- Deployed a containerized Python application to an RKE2 Kubernetes cluster on AWS EC2 using Docker and Kubernetes manifests for application deployment.
- Built and published Docker images to Docker Hub and used Kubernetes (kubectl), Git, SSH, and Linux command-line tools to manage and troubleshoot the application.
- Applied cybersecurity best practices including least privilege, IAM, security groups, SSH key-based access, and secure cloud resource management.

ADDITIONAL INFORMATION

Technical Skills: Python, C, AWS, Docker, Kubernetes (RKE2), Rancher, Linux (Ubuntu/Kali), Wireshark, Nmap, Git, SSH, IAM, SysML, Innoslate

Languages: English (Native), Nepali (Native), Hindi (Intermediate), American Sign Language (Basic)

Projects:

AccessArena: <https://github.com/regmiprakriti444-arch/AccessArena>

- Developed a cybersecurity-focused web application demonstrating role-based access control (RBAC) and secure user access management concepts.
- Designed interactive scenarios and difficulty levels to help users understand authentication, authorization, and access control principles.

Secure Shuttle System Modeling Using MBSE

- Developed a SysML-based system architecture model for a university transit system using MBSE principles.
- Integrated cybersecurity concepts including role-based access control, secure tracking, and system requirements analysis to support a resilient design.
